## What is claimed is:

- A security element disposed in a web surface, comprising: at least one first surface element of electrically conductive and non-
- 5 conductive sections; and

10

- at least one second surface element of optical diffraction.
- The security element of claim 1, wherein the electrically conductive sections are of different conductivities.
- 3. The security element of claim 1, wherein the first and second surface elements are interdigitated.
- The security element of claim 1, wherein the electrically conductive
  sections are disposed in the web surface on different planes thereof.
  - The security element of claim 1, wherein the electrically conductive sections are made of metal.
- 20 6. The security element of claim 1, wherein the electrically conductive sections are made of electrically conductive ink.
- The security element of claim 6, wherein the electrically non-conductive sections are made of ink visually indistinguishable from the electrically
   conductive ink.
  - The security element of claim 1, wherein at least one of the conductive, non-conductive and optical diffraction surface elements is magnetically responsive.
